APPLICATION

PRESS RELEASE

**Regarding the information related to the development partnership fee
for the i-Depot SuperApp@LTA application from 00:00 on June 29, 2024**

Dear Valued Customers/Partners,

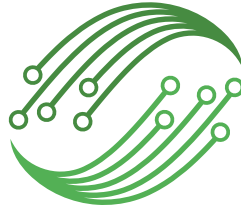

First of all, Logistics Technology Application Joint Stock Company (LTA) would like to extend our warmest greetings and best wishes to you. We sincerely thank you for your trust in using and partnering with our products and services over the past time.

Since the i-Depot SuperApp@LTA application, developed by Logistics Technology Application Joint Stock Company, was put into operation to replace manual transactions at the THT E-logistics Operation Center in Hai Phong, we have received many feedbacks and suggestions from customers and partners during its implementation. The i-Depot SuperApp@LTA application has become a key element in the logistics process in general and operations at the THT E-logistics Operation Center in Hai Phong in particular, significantly improving yard transactions, reducing waiting times for drivers, saving travel costs, and ensuring financial transparency for customers and partners using the application.

In addition, synchronizing two types of accounts (truck owners and drivers) provides optimal benefits to truck owners. Orders are automatically connected from the truck owner's account and synchronized with the driver's account to execute orders at the depot, eliminating the need for drivers to access the truck owner's account to view order codes. This is considered a new step forward, helping truck owners manage orders, transaction history, drivers, and cargo more effectively.

From the depot's perspective, supervising container lifting and lowering since the i-Depot SuperApp@LTA application came into operation has optimized time usage. It takes only 30 minutes from order activation to the completion of handling operations, effectively managing the flow of vehicles in and out. This keeps the control gate corridor clear, prevents congestion, and significantly reduces order approval times, so drivers no longer have to wait long, creating a comfortable working environment for the driving team.

Thanks to the support, suggestions, and feedback from our valued customers and partners throughout the application's operation and upgrades from the very beginning, the entire yard operation process has been optimized effectively. Drivers have expressed satisfaction with both time and cost savings, as well as the transparency of statistical records. We are committed to continuously updating new technology trends and applying them in practice to bring the best experience to our customers.

PRESS RELEASE

Regarding the information related to the development partnership fee for the i-Depot SuperApp@LTA application from 00:00 on June 29, 2024

In this latest improvement, starting from 00:00 on June 29, 2024, Logistics Technology Application Joint Stock Company (LTA) will continue to upgrade the quality of the i-Depot SuperApp@LTA application. We aim to perfect existing features and develop advanced features by integrating a mobile ecosystem to bring maximum benefits, significantly saving time and costs for drivers and all customers using services at the THT E-Logistics Operation Center in Hai Phong.

By partnering with the i-Depot SuperApp@LTA application at a cost of 20,000 VND per container lifting/lowering order at the THT E-Logistics Operation Center (which can be either a single order or a sub-order of a general order), our valued customers and partners have contributed to the mission of Logistics Technology Application Joint Stock Company to bring mutual benefits to all users of the i-Depot SuperApp@LTA application, bringing us closer to modern utility services in the future.

Through this announcement, Logistics Technology Application Joint Stock Company hopes that our valued customers and partners will continue to accompany us on the digital transformation journey of the logistics industry. The benefits of digitization will undoubtedly provide us with a solid foundation to navigate the rapidly changing market. Our company will always listen to and appreciate all contributions from our customers and partners to continuously improve the quality of our services and products, striving to serve you in the best possible way.

Your success is our success!
